Chappell J, Manna KR, WPI; 2000-292839/25. P-PSDB; AAY90858. Novel terpene synthase enzymes, useful for producing terpene hydrocarbons, e.g. fragrances or antitumor agents, are derived from known enzymes by specific amino acid alterations.

Disclosure; Page 439-443; 450pp; English.

The present invention describes an isolated terpene synthase (I) comprising a region with at least 20% identity to region 265-535 of a 548

Thu Aug

```
carbon atoms (alphaC) that have interatomic distances, between each cherwon atoms (alphaC) that have interatomic distances, between each other, within tabulated ranges, have a centre point (within a sphere of radius 2.3 Angstrom) within tabulated ranges, and have an ordered carangement of R groups (defining as side chains), excluding specific tabulated arrangements (tables given in the specification). (I), and contained arrangements (tables given in the specification). (I), and contained arrangements (tables given in the specification). (I), and contained a signal transductor a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, flavours, pheromones, defensive agents, pigments, antitumour agents, components of signal transduction pathways, precursors of steroid components of signal transduction pathways, precursors of steroid components of signal transduction pathways, precursors of steroid components of signal transduction pathways, precursors of steroid components of such a sphetoreceptors and as co-factor side chains. Components of signal little or no catalytic activity (and nucleic acids convanted propersors) as nutrient supplements; for affinity purification of septencides, as nutrient supplements; for affinity purification of septences of products or nucleic acids for monitoring expression of terpene synthases may produce novel terpene convaluation of products. Nucleotide sequences encoding mycrehe synthase, limonene synthase and pinene synthase from Grand fir may be incorporated into any organism (e.g. inteat plant, animal, microbe), or derived cell culture that produces geranyl diphosphate for the production of the aforementioned enzymes or their products. The sequences when expressed in transfected cells may also be used for the production of modification of flavour and aroma properties, improvement of defense capability, and the alteration of other ecological interactions mediated by mycrene, limonene, pinene, of other ecological interactions mediated by mycrene, limonene, pinene, of plant seeds for the extraction of oil or meal. cDNAs encoding myrcene synthase, pinene synthase and limonene synthase from Grand Fir were sequences of different plant synthase enzymes, four conserved sequences of different plant synthase enzymes, four conserved sequences were identified for construction of four degenerate primers (AAX08646.

49). One of these primers (AAX08648) was an antisense primer and used for primer the orbor three senses primers. Only a combination of primers (AAX08649 generated a PCR product which was 110 base pairs in CCC transform E.coll XII-Blue cells and the inserts were sequenced. Four CCC transform E.coll XII-Blue cells and the inserts were sequenced. Four concern a Grand Fir CDNA library. One of these clones is the myrcene conserved in a synthase sequenced general conserved in the conserved conserved in the conserved conserved in the modified are sequenced in the conserved in the modified are conserved in the conserved in the modified are conserved to screen a Grand Fir CDNA library.
